# Lean Six Sigma Yellow Belt to Green Belt Training Course Upgrade

 3158 3955

 [REQUEST QUOTE](#)

 2.0 DAY COURSE

This training course utilizes lab exercises, presentations, hands-on activities and lectures to give you a firm understanding of Lean Six Sigma at the Green Belt level. You will learn the skills you need to lead the Lean Six Sigma method improvement projects, the ability to use all steps of DMAIC methodology, to work with teams headed by a Lean Six Sigma Black Belts and aid your organization on implementing the Lean Six Sigma efficiently.

On the successful completion of your training, you will be qualified to finish a Lean Six Sigma project in your organization. This course is designed for people who have completed the PD Training Yellow belt course.

Now available throughout Singapore, this Lean Six Sigma Green Belt Certification Training Upgrade from Yellow Belt course can be delivered at your premises anywhere in Singapore by one of our expert local or international trainers.

Contact us today for a group quote.

## What You'll Gain:

Lean Six Sigma Green Belts are considered as great assets to a process improvement team. This Lean Six Sigma Green Belt Certification Training Upgrade from Yellow Belt course provides you the terminologies, philosophies and tools required to pass the IASSC Green Belt certification exam.

Prior to accepting your enrolment, PD Training will provide you with an IASSC Practice Test to confirm your existing knowledge, and if accepted, we will provide you with the IASSC authorised Green Belt training materials a week before the course runs, so you can review the materials beforehand and pick up the training without missing a beat.

This upgrade course includes days 4 and 5 from the complete 5-day Green Belt course. It picks up from where the Yellow Belt training left off.

By moving up from the Yellow Belt to Green Belt, you will learn and develop substantial skills in the **Analyse** and **Improve** phases of DMAIC.

## Outcomes

During this course, participants will enhance their skills above the Yellow Belt level and develop:

- Ability to use a structured approach to process improvement
- Ability to use all steps of DMAIC (*with a focus on Analyze and Implement*) methodology
- Skill to achieve sustainable quality improvement through process improvement
- Understanding of the tools of process discovery
- Understanding of variation in processes
- Skill to reduce variation in processes and achieve predicted outcomes
- Ability to identify, measure and analyze process potential
- Usage of inferential statistics
- Usage of hypothesis testing
- Understanding when to use which Six Sigma methodology
- Ability to use Capability Analysis to control processes
- Knowledge of the interdependence of Lean tools
- Skill to prevent, identify and control defects
- Understanding and use of statistical process control
- Skill to train, document, monitor, respond, and align systems
- Skill to provide sustainable and cost-effective improvement in processes

---

## Modules

### Lesson 1: Brief review of Yellow Belt content (Define Phase)

### Lesson 3: "X" Sifting (Analyze Phase Module 1)

LSS Green Belt Analyze Phase - The Analyze Phase of the DMAIC methodology is constructed to introduce important Lean Six Sigma tools for isolating critical factors.

- Perform a Multi-Vari Analysis
- Interpret and a Multi-Vari Graph
- Identify when a Multi-Vari Analysis is applicable
- Interpret what Skewed data looks like

### Lesson 2: Brief review of Yellow Belt content (Measure Phase)

### Lesson 4: Inferential Statistics (Analyze Phase Module 2)

- Explain the meaning of the term "Inferential Statistics".
- Describe the basic tenets of the Central Limit Theorem.
- Describe the impact of sample size on your estimates of population parameters.
- Explain Standard Error

- Explain how data distributions become Non-normal when they are really Normal

#### **Lesson 5: Intro to Hypothesis Testing (Analyse Phase Module 3)**

- Articulate the purpose of Hypothesis Testing
- Explain the concepts of the Central Tendency
- Be familiar with the types of Hypothesis Tests

#### **Lesson 7: Hypothesis Testing Normal Data Part 2 (Analyse Phase Module 5)**

- Be able to conduct Hypothesis Testing of Variances
- Understand how to Analyse Hypothesis Testing Results

#### **Lesson 9: Hypothesis Testing Non-Normal Data Part 2 (Analyse Phase Module 7)**

- Calculate and explain test for proportions
- Calculate and explain contingency tests

#### **Lesson 11: Process Modeling Regression (Improve Phase Module 1)**

LSS Green Belt Improve Phase - The Improve Phase of the DMAIC methodology is constructed to introduce important Lean Six Sigma tools for properly controlling solutions.

- Perform the steps in a Correlation and a Regression Analysis
- Explain when Correlation and Regression is appropriate

#### **Lesson 13: Designing Experiments (Improve Phase Module 3)**

#### **Lesson 6: Hypothesis Testing Normal Data Part 1 (Analyse Phase Module 4)**

- Determine appropriate sample sizes for testing Means
- Conduct various Hypothesis Tests for Means
- Properly Analyse Results

#### **Lesson 8: Hypothesis Testing Non-Normal Data Part 1 (Analyse Phase Module 6)**

- Conduct Hypothesis Testing for equal variance
- Conduct Hypothesis Testing for Medians
- Analyse and interpret the results

#### **Lesson 10: Wrap Up & Action Items (Analyse Phase)**

#### **Lesson 12: Advanced Process Modeling (Improve Phase Module 2)**

- Perform Non-Linear Regression Analysis
- Perform Multiple Linear Regression Analysis (MLR)
- Examine Residuals Analysis and understand its effects

#### **Lesson 14: Wrap Up & Action Items (Improve Phase)**

- Determine the reason for experimenting
- Describe the difference between a physical model and a DOE model
- Explain an OFAT experiment and its primary weakness
- Shown Main Effects Plots and interactions, determine which effects and interactions may be significant
- Create a Full Factorial Design

**Lesson 15: Brief review of Yellow Belt content**
